

****Convenience Group Sustainability Statement****

For over 50 years, Convenience Group has led the way in providing innovative, sustainable solutions throughout the Greater Toronto Area (GTA) and Ontario. As pioneers in the industry, we have proudly supported a wide range of clients, from businesses to institutions, helping them achieve their goals while adopting environmentally responsible practices.

One of the most significant ways we've empowered our clients is by helping them cut energy consumption through our high-performance window films. These energy-efficient films have enabled businesses to dramatically reduce heating and cooling costs by limiting solar heat gain and improving insulation. This not only enhances indoor comfort but also lowers energy usage, contributing to significant reductions in greenhouse gas emissions. Our installations have saved substantial amounts of energy, delivering both financial savings for our clients and environmental benefits.

Sustainability is at the core of our mission. We are mindful of our environmental impact, and we continuously prioritize solutions that conserve resources and minimize waste. A key example is our commitment to resurfacing and restoring existing structures, such as walls, instead of tearing them down and rebuilding with new materials. This approach preserves valuable resources and eliminates the energy consumption tied to demolition and reconstruction, directly reducing our carbon footprint.

In addition to reducing energy demand, our projects have made a notable contribution to lowering emissions. By implementing solutions like energy-saving window films, we help businesses significantly reduce their reliance on artificial heating and cooling, which in turn decreases overall greenhouse gas emissions. Over the years, this has led to measurable reductions in carbon dioxide output, aligning with global sustainability efforts.

Our dedication to sustainability also extends to choosing the best materials from manufacturers who share our commitment to environmental responsibility. We partner with industry leaders like 3M and Riot Glass, both of which are renowned for their sustainable product lines. These partnerships ensure that our clients receive top-quality

solutions that not only meet their functional needs but also align with their sustainability goals.

Moreover, our installations have played a vital role in conserving natural resources, including saving thousands of trees by reducing the need for new construction materials. By extending the life of existing surfaces and improving overall building performance, we support our clients in reaching their sustainability targets while protecting the environment.

As we move forward, we remain dedicated to leading with environmentally conscious, innovative solutions that reduce waste and promote energy efficiency. Our ongoing commitment reinforces our position as a trusted and responsible leader in the community, ensuring a sustainable future for the next 50 years and beyond.
